

3D-P Launches Plans for Industry Expansion and Diversification

Leader in Mining Technology Solutions set to expand into Oil/Gas, Railway and Seaports.

Calgary, Alberta, Canada – February 20, 2012: 3D-P a leader in mining technology solutions launched a new website today purporting its intent to diversify the company’s industry focus. For well over a decade 3d-p, headquartered in Canada, has successfully deployed ruggedized networking and open computing platforms in mines across the globe and has established field offices in Australia, South America and the US.

“We’ve known from the beginning that our solutions would work extremely well in other industries. Our open source, “plug and play” technology is both needed and has been sought after by industries unrelated to mining for quite some time,” said Sean McClary, Vice President of Global Sales. “Our new facility and additional personnel provide ample infrastructure for aggressive growth. The time is right for us to begin the diversification.”

About 3D-P

3D-P was formed in 1996 with a goal of bringing world-class technologies to mining and the natural resource industry. The company’s products increase productivity and decrease costs through the implementation of technology that is proven, reliable and cost effective.

The team of experts includes Mining Engineers, Electrical Engineers, Telecommunications Engineers, Consultants and Software Engineers that have decades of experience in the Natural Resource industry developing advanced technology systems. The company brings that experience to work every day solving mobile application and wireless network problems. Visit the new web site at www.3d-p.com. For technical solutions visit globalminingsolutions.wordpress.com, and follow @3DPMining on Twitter.
