

3D-P announces release of Health Data On Demand™

Scottsdale, Arizona – November 1, 2010

3D-P, a leading provider of technology products for the mining industry, is pleased to announce the introduction of Health Data On Demand™.

No longer do you have to wait for the Truck to come in for service, nor do you have to send a tech into the field to download your data. Health Data on Demand now allows you to download and analyze all the available machine health data (not just the telemetry data), on whatever schedule you'd like to utilize, even on demand. Health Data on Demand helps you increase production, decrease costs and increase the life and effectiveness of the equipment. All this, without the need for additional hardware. Your 3D-P Intelligent Endpoint has the power and capability to download this data from the equipment and send it to your VIMS Supervisor, or VIMS PC networked computer, while at the same time continuing the connectivity to your onboard applications with the reliability you've come to expect from the Intelligent Endpoint product line.

Health Data on Demand offers you:

- +Integration with service port**
- + Automatic data downloads**
- + Time-based downloads**
- + Position-based downloads**
- + Serial communications handled on-board**
- + Broadband delivery of machine health system data**
- + Built-in Datalogger functionality**

Contact your 3D-P Account Manager at 800-955-9337 for additional information.
